EDUCATION

Syracuse University, Syracuse, NY

M.S. in Computer Science, GPA: 3.46/4.0

August 2024 - May 2026

University of Mumbai, Mumbai, India

B.E. in Computer Engineering, GPA: 3.74/4.0

August 2020 - May 2023

SKILLS

Languages	Python, JavaScript, TypeScript, Java, HTML5, CSS/SCSS
Frontend	React.js, Next.js, Redux, Material UI, TailwindCSS, WebSockets
Backend	FastAPI, Django, Flask, Node.js, Express.js, Spring Boot, GraphQL, REST APIs
Databases	PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Oracle
Cloud & DevOps	AWS (Lambda, ECS, SQS, CloudWatch, S3), Docker, Kubernetes, Jenkins, GitHub Actions, Git
AI/ML	LLM Development, RAG Frameworks, NLP, PyTorch, TensorFlow, Hugging Face, FAISS
Domains	Full-Stack Software Development, GenAI Integration, Microservices Architecture
Certifications	AWS Certified Solutions Architect - Associate

EXPERIENCE

iConsult Collaborative

Syracuse, NY

Software Engineer Intern

May 2025 - March 2026

- Cut page load time by 63% (from 4 seconds to 1.5 seconds) by identifying and rewriting 3 unoptimized SQL queries.
- Delivered 3 production-ready frontend features within 2 sprint cycles by building React and TypeScript components from Figma specs and integrating REST APIs.
- Reduced manual incident response time by 35% by architecting a serverless notification service using AWS Lambda and CloudWatch to monitor application failures and latency.
- Improved application response time by 40% by profiling the AWS RDS database layer, identifying 2 high-frequency query columns missing indexes, and adding them to the EC2-hosted backend.

Accenture

Mumbai, India

Software Engineer

September 2023 - July 2024

- Joined an enterprise Java team as a new graduate, wrote controller and repository layer classes to migrate parts of an existing codebase to Spring Boot - code that went through senior engineer review and shipped to a live client system.
- Optimized API response time by 62% (from 650ms to 250ms) by analyzing PostgreSQL query execution plans and adding targeted indexes to 4 slow-running queries.
- Reduced QA-reported defects by 18% over two sprints by writing 35+ JUnit and Mockito test cases across assigned Spring Boot modules, achieving 75% code coverage.
- Assisted in integrating a third-party REST API into an existing Spring Boot backend by writing 3 integration classes and handling 4 error response scenarios.

PROJECTS

ClearPath AI - US Immigration Assistant

[GitHub](#)

Python, LangChain, RAG, LLM APIs, FastAPI, PostgreSQL, Scikit-learn, React

- Navigating US visa requirements as an international student is genuinely painful - so built a RAG pipeline over 4 official USCIS documents with PostgreSQL-backed memory for multi-turn conversations, returning answers in under 3 seconds.
- Trained a Random Forest on 25,480 real USCIS cases, reached 73.6% accuracy, and made predictions transparent by integrating SHAP explainability into a React frontend so users understand the reasoning behind each result.

TenantLens - Renter protection platform

[GitHub](#)

Java Spring Boot, Spring Security, Python FastAPI, AWS, PostgreSQL

- Built 3 independent microservices - fake review detection, rent manipulation scoring, and neighborhood safety analysis - each one deployable on its own, all feeding into a single trust score a renter can actually use.
- Designed the service boundaries before writing any code, so each service fails independently and the platform stays partially functional even when one service goes down.

AI Meeting Summarizer - Automated Meeting Intelligence

[GitHub](#)

Python, LangChain, LangGraph, ChromaDB, Groq LLM, OpenAI Whisper, FastAPI, React

- Audio in, structured summary out, under 1 minute - built on OpenAI Whisper for transcription, LangGraph for the agent workflow, and ChromaDB for follow-up question retrieval.
- Before shipping, ran the pipeline against 20+ different meeting transcripts, found 3 cases where the output was inconsistent, and fixed the prompts until the results were reliable.
